

**Peter Kaz****Subject:** North Cemetery Street Crossing.

To Whom it may Concern.

Please let it be known.

My name is Peter R Kaz and I drive over this Rail Road Crossing many times a day as I am General Manager at Industrial Fabricator Inc. 403 N Cemetery St.

On this street the Rail Road Crossing is getting rather rough and bumping to cross. A few of the timbers are out of place and elevated above the road surface.

I am concerned when I drive my car over this crossing because of the elevated timbers and possible damage that could be done to my vehicle if a timber would rock up and come in contact with the bottom of my car.

The Truck Drivers that have Double Drop Trailers that haul in and out of our facility have mentioned this crossing could use some maintenance.

Also the Freight haulers have said that they really should stop and drive over this crossing at a slow speed as rough as it is. My Office is about a 1/16<sup>th</sup> of a mile from the crossing and when the large trucks and trailers do not slow down to cross the Tracks my windows rattle as they cross, I always know when a truck is coming.

Regards.

Peter @ IFI.
